Front-end development: Arrays

JavaScript – Length of strings

The following exercise contains the following subjects:

● Array

Instructions

1. create an array with at least 5 strings, in different lengths.

2. Go over each string in the array and store the length of this string in a new array.

3. Console.log the new array of string lengths.

   For example: ["boo", "doooo", "hoo","ro"] will log this array: [3, 5, 3, 2].
