Front-end development: Basics

JavaScript – while loops

The following exercise contains the following subjects:

● for loop

Instructions

You are given two arrays:

const food1 = ["Noodle", "Pasta", "Ice-cream", "Meat", "Cucumber", "Olives"];

const food2 = ["Fries", "Ice-cream", "Pizza", "Olives", "Hamburgers"];

write a program that loops over the arrays and checks if both of them have the same values or not.

console.log true or false as the results. Tests it with same arrays, diff arrays, diff order etc.
